

# DataConnect™

An intelligent data integration system.

Powered By  **cureous**  
PRODUCTS  **LYNIATE**

DataConnect's™ high-performing data integration system, powered by the Lyniate™ Rhapsody® engine, enables robust processing and validation of health information. Built with HL7® FHIR® standard capabilities, the system has been expertly designed for seamless and reliable information processing and responsiveness to emerging data sources.

Accepts, routes, maps, and translates incoming disparate data sets according to custom configurations

Automates data quality validations, refreshed on demand and in real time, to ensure data integrity, completeness, and validity

Assures high-quality data outputs for downstream use cases, such as clinical portal, notification, and analytic and reporting services

## DataConnect™ Use Cases

Ensure scalable and rapid adaptation to emerging use cases with a system that supports all health data message formats and standards (e.g., HL7®, CCD®, NCPDP®, X12™, etc.)

Reduce the time and cost of traditional migration and conversion activities and ensure increased continuity of performance

Process large volumes of data quickly, seamlessly, accurately, and with a view to securely safeguard protected health information (PHI) that passes through the engine

Cureous Innovations™ is a reseller, installer, and subject matter expert in the configuration of the Lyniate™ Rhapsody® data integration engine in support of our clients' ever-evolving use cases.
