cureous INNOVATIONS®

curating data insights with interoperable services.

Innovative technologies and methodologies carefully developed to convert and curate diverse data assets into actionable insights in real-time. We help our customers make informed decision-making and overcome complex business challenges.

full-stack health information exchange

End-to-end HIE services to connect patients' health care through **improved interoperability**. Provides the resources and technology necessary to facilitate data sharing among diverse systems of care, produce sophisticated analytics and reporting, and ensure overall customer success and sustainability.

person identity management

Trusted software and algorithms constructing **longitudinal matching measures** to accurately track individuals and their health care over time and across data sources. Probabilistic and deterministic methods used to ensure data sources are as comprehensive, reliable, and up-to-date as possible.

support center management

Modern service desk software empowering customers to effectively and efficiently **overcome challenges as they arise**. An integrated ticketing and document repository system establishes collaborative interactions between users and technical teams to resolve questions with confidence.
interoperability solutions consultation

Leading interoperability standards expertise intended to give customers a **more meaningful and strategic understanding** of how their data and technologies can be integrated to support existing workflows, enhance patient care, and optimize future use cases.

programmatic & policy consultation

Several decades' worth of trusted health information technology programmatic and policy experience and expertise offering customers **data-driven consultation** to help break through common barriers and discover new frontiers in their health data and technology efforts.

imagine the unimaginable.

We're exploring the unbeaten path to develop interoperable ecosystems that improve patients' health, wellness, and care experiences. Through sophisticated applications of data and technology, we provide our customers with the tools and support necessary to evolve as new use cases arise.

full-stack health information exchange

- Develops and deploys **formidable technologies** and services that establish a foundation enabling the facilitation of effective health information exchange - from data collection through analytics and reporting.

- Ensures **customer success and sustainability** through collaboration with proven partners and trusted software invested in the transformation of patients' care coordination and delivery.

- Enables **accurate decision-making** at the point of care with systems that connect patients' health care activities when it matters most.

person identity management

- **Tracks individual patients** – and their health information – across disparate data sources, between facilities, and over time.

- Constructs **probabilistic and deterministic** matching measures to identify records that belong together, even if a patient's information changes.

- Compares, searches, matches, and links patients' records to ensure that their health records are as complete, **comprehensive**, and up-to-date as possible.

support center management

- Uses **machine learning** based on end users' keyword searches to intelligently recommend the most relevant resources to assist with questions and issues.

- Creates a dynamic and **collaborative interaction** between end users and technical teams to resolve questions with confidence.

- Provides end users with the necessary channels to contact a member of a **dedicated support team** via personalized email and telephone connections.

- Support Center is powered by Atlassian's Jira®, Jira Service Desk®, and Confluence® applications.

interoperability solutions consultation

- Innovation-led **advisory** to keep our customers ahead of the technology curve.

- Consumer- and patient-centric solutioning to inspire design and **optimize use cases**.

- Leading **interoperability standards** expertise to connect patients' health care.

Whether it's a puzzling coding standard, privacy or security requirement, tool or methodology, or software configuration, there's not a problem that our team of software engineers and industry leaders can't solve with you.

programmatic & policy consultation

- Data-driven consultation to rapidly implement actions and **realize value**.

- Adaptive customer engagement strategies to respond to **evolving needs and interests**.

- Trusted health IT policy experience to assist customers in **overcoming common barriers**.

Our team of industry leaders have several decades' worth of HIT/HIE and public/Medicaid policy experience. We offer a track record of reliability and innovation that can help break through common barriers and discover new frontiers in initiatives' health data and technology efforts.

let's create something extraordinary.

contact our team to learn how our interoperability services can advance your healthcare transformation activities.

we're here to help.
